

Quick Start Guide

- 1 Connect your iOS or Android device to your Wi-Fi network.

- 2 Twist Snap into the socket until tight. Then rotate the bulb counter-clockwise until the camera is at 6 o'clock.

- 3 Download & install the Snap app. Open the app and create a new account.

- 4 Switch on the power to the socket and follow the in-app instructions to set up your new Snap bulb.

ATTENTION

- Do not use with dimmers.
- Snap bulbs require constant power to operate. Fixtures with motion sensors may stop the flow of electricity to the socket. The effective range of your Wi-Fi router may not be sufficient to reach the Snap bulb. A Wi-Fi extender may be required to increase the range of your Wi-Fi network.

No Dimmers

No Motion Sensors

No Weak Wi-Fi
